

Congree for JustSystems XMetaL® Author Enterprise

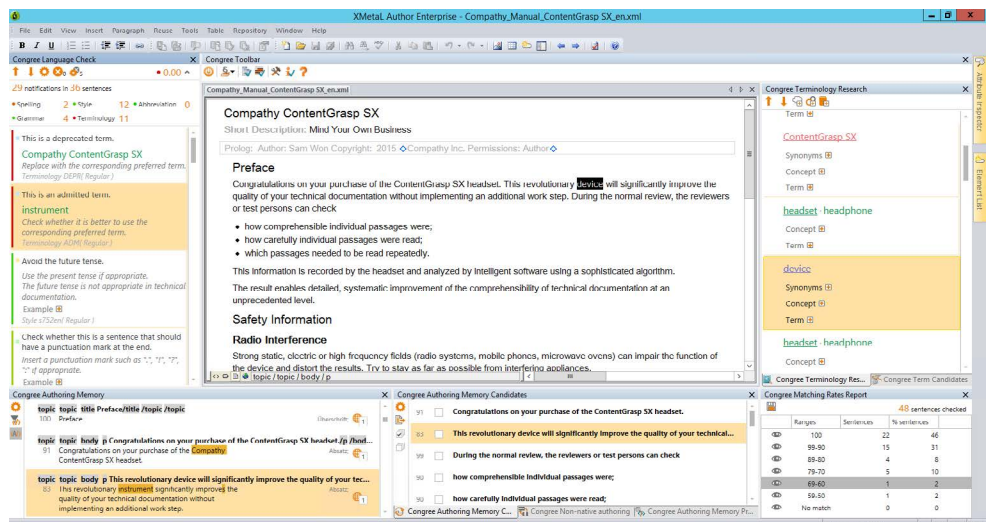

Our Philosophy

Congree is available as a plugin for various text editors. Congree blends in perfectly with the user interface of the text editors. At the same time, the program functions and basic operating concept remain consistent and are standardized in all text editors. In this way, you can always expect the same Congree quality, regardless of which text editor you use. An overview of all supported versions and system requirements of the plugin is available in the manual "System Requirements and Installation Scenarios".

Overview Based on XMetaL® Author Enterprise

» Example application scenario: Language Check and Terminology Research

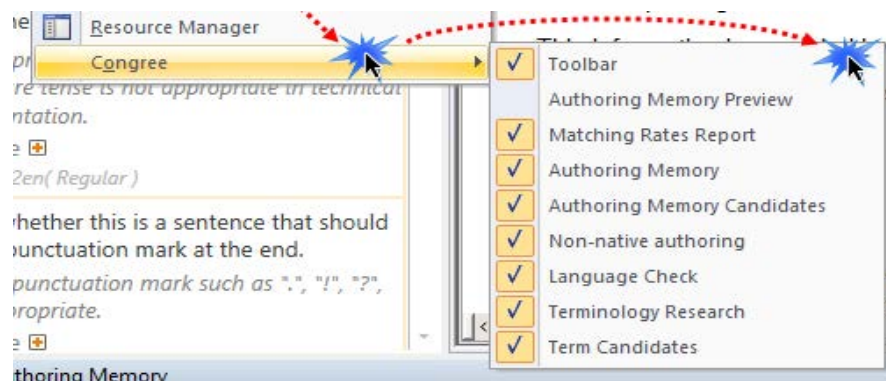

» Display of additional Congree functions

■ Configure

... Your Congree Panels According to Your Needs

The menus of the text editor are only expanded at one point: The menu item "Congree" is added to the drop-down menu "View". All Congree panels can be shown and hidden easily via "View" - "Congree":

The Congree integration in JustSystems XMetaL® Author Enterprise also supports flexible detachment, repositioning, and docking of Congree panels in the text editor. Thus, you can organize your panels as you wish, stack them, or even move them to another monitor, e.g. in order to maximize the editing area:

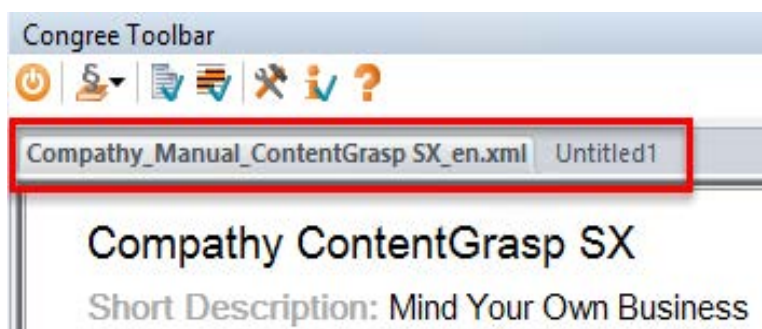

» Docking and repositioning Congree panels

■ Work

...with Several Opened Documents

JustSystems XMetaL® Author Enterprise allows concurrent operation in different documents arranged in tabs. Congree supports this mode of operation by allowing you to work concurrently with Congree in multiple JustSystems XMetaL® Author Enterprise tabs in different contexts.

An overview of all supported versions and system requirements of the plugin is available in the manual "System Requirements and Installation Scenarios".
