

## Our Philosophy

## Overview Based on XMetaL® XMAX 8

Congree blends in XMetaL® XMAX™, allowing complete integration in systems of other vendors within the scope of a project.

Congree is available as a plugin for various text editors. Congree blends in perfectly with the user interface of the text editors. At the same time, the program functions and basic operating concept remain consistent and are standardized in all text editors. In this way, you can always expect the same Congree quality, regardless of which text editor you use. An overview of all supported versions and system requirements of the plugin is available in the manual "System Requirements and Installation Scenarios".

### » Example application scenario: Language Check and Terminology Research

### » Display of additional Congree functions

## ■ Configure

### ... Your Congree Panels According to Your Needs

If you do not need a Congree panel temporarily, you can quickly hide it. The Congree integration in JustSystems XMetaL® XMAX also supports flexible detachment, repositioning, and docking of Congree panels in the text editor. Thus, you can organize your panels as you wish, stack them, or even move them to another monitor, e.g. in order to maximize the editing area:

» Docking and repositioning Congree panels

## ■ Work

### ...with Several Opened Documents

JustSystems XMetaL® XMAX allows concurrent operation in different documents arranged in tabs. Congree supports this mode of operation by allowing you to work concurrently with Congree in multiple JustSystems XMetaL® XMAX tabs in different contexts.

An overview of all supported versions and system requirements of the plugin is available in the manual "System Requirements and Installation Scenarios".
